| Module Objectives | Students are in a position to identify, explain, and link specific problems in the agri-food sector. They are able to independently work out, analyze, and critically assess specific food policy issues. This enables the students to assess the significance of policy interventions, as well as to develop ideas for alternative concepts. |
| Contents | Lecture: Overview of policy aspects in Food Economics, objectives, instruments, and limitations of economic policies in the food sector, formation of interest groups and lobbying in the food sector, economic systems and regulation policies in the food sector, international competitiveness and competition policies for food products , international trade restrictions, tariff and non-tariff trade policy measures, measurement of trade restrictiveness, determinants of trade restrictiveness in the agri-food sector Seminar: Presentation and discussion of selected topics by the course |
